Application Name:

ScoreSpot

Vision Statement:

For the world's biggest football fans, ScoreSpot is there to provide up to the minute stats that make viewing your favorite club as quick and easy as possible.

Version Control:

<https://github.com/LucasPatenaude/ScoreSpot>

Development Methodology:

We're going to be using a scrum framework to complete this project. Given that we're right on the cusp of spring break, and our members are going to be remote from each other, we're going to focus on having set meetings where we hammer out issues and implement code over longer

meetings as opposed to letting people commit at random times. This will create a more cohesive plan and keep everyone in the loop.

On GitHub we have a kanban board to post our needed features and jobs that we'll be using to keep an organized plan for the application.

Communication Plan:

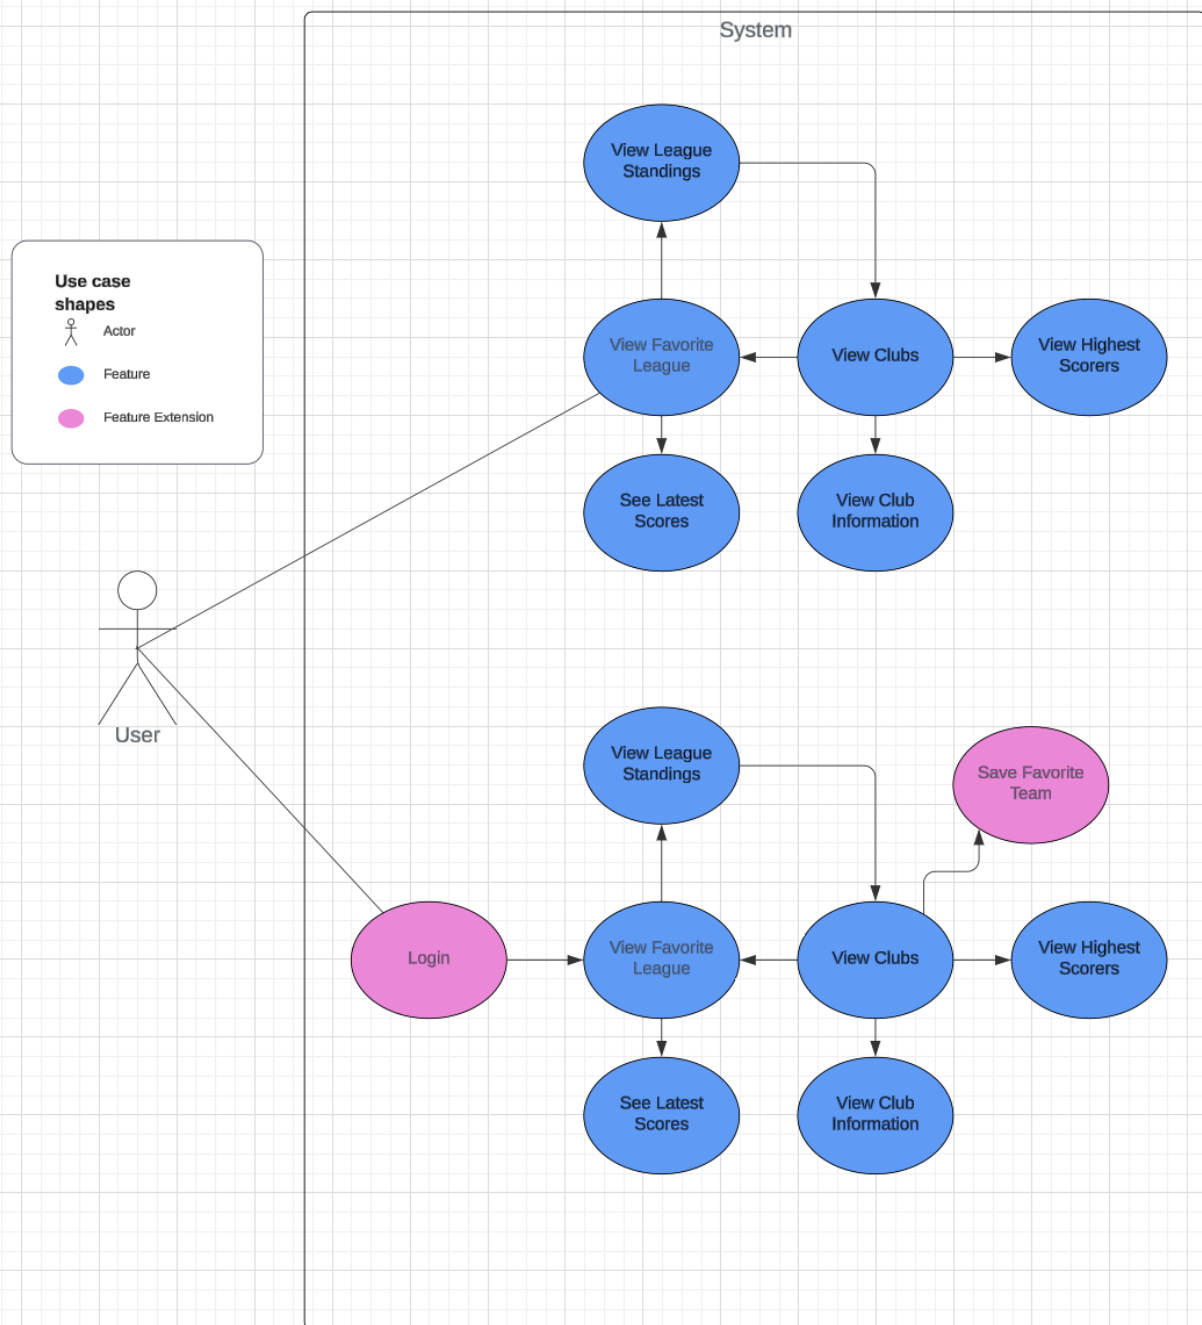

Our team is using discord to communicate and notify each other about progress on our application. We are specifically utilizing the channel feature to distribute and organize our messages.

Meeting Plan:

Our team has agreed to meet on Tuesdays anytime after 4, varying on the week. This is in person so we can collaborate like a beautiful ensemble. We hope to meet with the TA on Thursdays at 4 every week on zoom.
